

JAgraffe: Changelog

JAgraffe allows to quickly send scaled down pictures by email via drag and drop

Table of contents

1 0.9.0.....	2
2 0.2.2.....	2
3 0.2.1.....	2
4 0.2.0.....	2
5 0.1.1.....	2
6 0.1.0.....	3

1. 0.9.0

- Upgraded to IzPack 3.2.10 (and changed its license to Apache 2.0)
- fixed shortcut creation for Freedesktop systems
- fixed encoding for text files

2. 0.2.2

- removed ugly and useless big purple icon
- fixed quality widget stealing focus from shortcuts
- incremented scroll bar unit increment (mouse wheel friendly)
- Changed image prefix from JA_ to IMGJ_
- Added -server flags to JVM startup scripts
- increased somewhat JVM Xmx

3. 0.2.1

- The displayed images really are the compressed jpeg images
- Compression ratio can be changed now
- When new images are Dnd into JAgraffe, the GUI scrolls down to the last image
- Under the hood : some refactor

4. 0.2.0

- The launcher created on Linux should work now
- Changed JPG compression quality back from 0.85 to 0.90
- Included NOTICE.txt file for izpack
- Added tooltip with filename for images
- Added java.os.tmpdir path display
- Dnd to external app now works straight from the images
- Forbid Dnd twice the same picture into JAgraffe
- Auto refresh when source image is changed
- Display number of error and forbid DnD while number of error is not 0
- Auto remove image from GUI when output image is deleted from temporary directory (to cope with the behavior of some file manager on Linux, that allow to move the files)
- Added manifest file to jar

5. 0.1.1

- added automatic selection of the image group icon
- Changed default resize to 640x?
- Changed JPG compression quality from 0.90 to 0.85
- Do not increase the size of a smaller image
- Ask for quit confirmation, only with 0 images present

6. 0.1.0

Initial version
